**Cow’s Milk Allergy / Multiple Food Protein Intolerance**

- **Eliminate Cow’s Milk Protein and/or Other Appropriate Allergens from Diet**
  - **Is Patient at High Risk of Anaphylactic Reaction to an Offending Allergen?**
    - **Yes**
      - AABF as a sole source or supplement to diet as directed by healthcare professional
    - **No**
      - **<2 Years Old?**
        - **Yes**
          - Hypoallergenic formula as sole source or supplement as directed by healthcare professional
        - **No**
          - **2+ Years Old?**
            - **Yes**
              - Elimination diet and hypoallergenic formula as directed by healthcare professional
            - **No**
              - **Is Cost of Formula an Issue?**
                - **Yes**
                  - Continue with eHF as directed by healthcare professional
                - **No**
                  - **Is Extensively Hydrolyzed Formula (eHF) Tolerated?**
                    - **Yes**
                      - Continue with eHF as directed by healthcare professional
                    - **No**
                      - Monitor nutritional status
              - **Continue with Elimination Diet**
          - **Meeting Nutrient Requirements?**
            - **Yes**
              - Continue with eHF as directed by healthcare professional
            - **No**
              - Monitor nutritional status

- **Consider Neocate®**
  - **0-1 year:** Neocate Infant DHA and ARA
  - **6+ months:** Neocate® Nutra
  - **1+ years:** Neocate® Junior with Prebiotics (Unflavored, Vanilla)
    - Neocate® Junior (Unflavored, Chocolate, Tropical)
    - Splash

- **Individual requirements as directed by healthcare professional**

---

a. Hypoallergenic formula includes AABF (Amino Acid-Based Formula) and eHF (Extensively Hydrolyzed Formula)

b. Neocate Nutra is a supplemental semi-solid elemental food for 6+ months

c. In settings where the cost of an AABF is lower, the use of an AABF may be equally reasonable.

* DRACMA Guidelines (Fiocchi et al., J Allergy Clin Immunol 2010)
