

# Guide to PKU

# Babysitters

## What is PKU?

PKU is short for Phenylketonuria (fen-el-key-ton-uria). It is a genetic disorder that some people are born with. People with PKU are not sick, but need a special PKU formula and a diet that is low in whole protein.

## What happens?

When a person with PKU eats protein his/her body cannot break it down all the way. Eating too much protein will cause an unhealthy buildup of something called PHE (fee), which is short for phenylalanine (fen-el-al-a-neen). To stay healthy, those with PKU must follow a diet low in whole protein and drink PKU formula every day.

## What is a low protein diet?

A low protein diet is mostly fruits and vegetables plus special low protein foods. People with PKU cannot have foods high in whole protein like meat, poultry, fish, eggs, nuts, seeds, peanut butter, milk, yogurt, cheese and other dairy products. Regular bread, pasta, rice and cereal also contain protein and are usually not permitted.

## Be a Super Sitter!

- ✓ Make sure the child drinks PKU formula at the scheduled times. Ask the parent for tips to help the child drink the formula.
- ✓ Always encourage diet adherence. "Just a taste" can set a bad example that not following the diet is an acceptable behavior.
- ✓ When the child is drinking the formula be positive. Any negative comments about the taste or smell may discourage the child from drinking the formula.

*PKU formula is the main source of protein in the PKU diet. People with PKU must drink formula every day.*

# What can they have?\*

## NOT PERMITTED

Meat, poultry, fish, eggs, nuts, peanut butter, seeds, regular bread, pasta, rice, grains, beans, milk, yogurt, cheese (other dairy), and foods containing aspartame such as some sugar-free gums, diet drinks and some medications.

## PERMITTED IN LIMITED AND MEASURED AMOUNTS

Fruit juice, rice milk, butter, starchy vegetables such as peas, corn and potatoes.

## PERMITTED LOW PROTEIN FOODS

Special foods made to be low in protein, such as low protein breads, pastas and baking mixes. Many fruits and vegetables, dairy-free margarine, cooking oils and many sugar-based sweets (such as lollipops and jelly beans).

\*This is not a complete list. Permitted foods and quantities will vary. Always consult the metabolic clinic prior to making any changes to the PKU diet plan. To find out the PHE content of food, visit [HowMuchPHE.org](http://HowMuchPHE.org) or [MetabolicDietApp.org](http://MetabolicDietApp.org)
